

Guide to Correct Placement of Labels for Line Identification

Reduce the Risk of Wrong Route Administration

Ensure all connected access lines and tubing are correctly labelled with the appropriate labels as per Line Labelling Policy.

- Labels **must** be positioned **within 50mm/5cm** from a port or entrance/exitpoint in a visible area.

- The labelling of access lines is the responsibility of the member of staff inserting or connecting the line.
- **Please note this policy does not require the labelling of the invasive medical device. Only label the line or tubing attached to that medical device.**
